

Enquiry Types

Careers connected to habitats:
deep sea diver, explorer, gardener

Lesson Sequence

1. Learn about habitats

2. Appreciate that environments are constantly changing

3. Explore the rainforest and its problems

4. Describe life in the ocean

5. Discover the Arctic and Antarctic habitat

6. Create a model of a habitat

Habitats

- A habitat is a place where organisms live.
- A microhabitat is a small area within a habitat which differs somehow from the surrounding habitat.

How habitats change

- Cutting down forests
- Polluting land and water
- Taking away resources

If a habitat changes too much, it can cause the animals that live there to become endangered or extinct.

The rainforests

Rainforests are rich in biodiversity. They contain lots of helpful resources to help us make food, clothes and medicine. It is important to protect the rainforests.

Examples of habitats

desert

rainforest

ocean

wetlands

The Arctic and Antarctic

- Tundra ecosystems are treeless regions found in the Arctic.
- Polar animals – like polar bears – have adapted by having thick fur or feathers.
- Polar bears, narwhals, caribou, seabirds and indigenous peoples live in the Arctic.
